ABOUT POLYCAB

Polycab India Limited is India's largest manufacturer of Wires and Cables and one of the fastest-growing FMEG companies with a consolidated turnover of ₹224+ Bn in FY25. We're at the forefront of providing innovative, safe, and energy-efficient products to a diverse set of customers via a strong distribution network of 4,300+ authorized dealers and 200,000+ retail outlets.

Our business operations span across India through 27 manufacturing facilities, 15 offices, and 34 warehouses. It also serves customers in 84 countries globally. Its 4,100+ employees are dedicated to upholding robust governance practices, preserving a customer-centric culture, serving communities, and embedding ecological consciousness into every step of the business.

Lighting, the **Polycab Way**

Polycab Lighting builds a bright, beautiful connection between modern design and state-of-the-art LED technology. Our lighting solutions are crafted to elevate every space, from creating warm, inviting ambiances at home to delivering precision lighting in offices and industrial spaces. With sleek aesthetics and superior brightness, we bring both style and functionality to life.

Choose Polycab Lighting to illuminate your surroundings with elegance, efficiency, and a promise of enduring brilliance, because every space deserves to shine brighter.

Product Quality

- a. In-house product testing via two fully equipped, NABL approved electronics R&D laboratories
- b. Highly experienced R&D personnel with expertise in lighting electronics for local, US/European and military-grade specifications
- c. Kaizen & TQM methodologies are implemented for production process enhancement

Innovation Focus

- a. Robust R&D initiatives to drive product innovation
- b. Development of electronically advanced LED Lights with high end technology
- c. Emphasis on designing decorative LED Lights with superior aesthetic appeal

Customer Service

Unwavering commitment to delivering superior customer service through our large footprint of 550+ service centres and quick resolution

Manufacturing & Availability

- a. India's pioneering manufacturing facility, is revolutionizing domestic production. Leveraging cutting-edge technology and deep expertise, our plant ensures the highest quality standards.
- b. Our state-of-the-art facility is equipped with advanced injection moulding machines, SMT lines, and assembly lines featuring automatic optical inspection-marking a significant milestone in India's industrial growth.
- c. The efficiency and eco-friendliness of our manufacturing technology are truly remarkable, representing a major step towards a more sustainable future.

Research & Development Initiatives

ROHS & Environment Sustainability

By embracing RoHS compliance, we demonstrate our dedication to sustainable manufacturing, reducing our environmental footprint and advancing towards our goal of achieving "NET - ZERO CERTIFICATION".

Research & Development

Our NABL - accredited lab empowers our R&D team to push boundaries in innovation, leveraging state-of-the-art testing and analysis capabilities.

The lab's expertise in electronics and engineering plastic testing enables us to develop and refine products that meet the highest standards of quality and performance.

How to **Choose Lights**

There are three layers of lighting when combined correctly will create the optimum aesthetic lighting solution.

Ambient lighting, also known as general lighting, is the foundational layer of illumination in any room. It provides the overall light that enables you to navigate a space safely and comfortably without relying on direct light sources. Ambient lighting delivers uniform light throughout a room. It typically comes from overhead fixtures like ceiling-mounted lights, recessed lighting, or wall-mounted fixtures.

TASK LIGHTING

While ambient lighting sets the overall tone, task lighting targets specific activities. It's all about function—providing light where you need it most to complete a task with ease and clarity. Task lighting is a focused beam of light that enhances visibility for activities like reading, cooking, working, or grooming.

ACCENT LIGHTING

Accent lighting is the most artistic of the three lighting types. Its role is to highlight specific features and add visual interest. Accent lighting draws the eye and adds depth and texture to a room. Accent lighting is used to emphasize architectural elements, artwork, decorative pieces, or even textures like brick or stone walls.

Let's Understand **Lighting Terms**

LED

LED (Light Emitting Diode) is a modern lighting technology that offers high energy efficiency, long lifespan, and minimal heat emission. Unlike traditional bulbs, LEDs convert electricity directly into light, making them ideal for both residential and commercial use.

KELVIN

Kelvin (K) measures the color temperature of light. Lower Kelvin values (2700K–3000K) produce warm, yellowish light that creates a cozy and relaxing atmosphere, ideal for bedrooms and living rooms.

Mid-range values (3500K–4100K) offer natural white light, suitable for kitchens and bathrooms. Higher Kelvin values (5000K–6500K) emit cool, bluish light that enhances alertness and visibility, perfect for workspaces and outdoor areas.

LUMENS & LUX

The amount of light emitting by a source is lumen and higher the lumens, the brighter the light.

The amount of light falling on a surface is lux and it will depend on distance of the surface from source and beam angle.

COLOR RENDERING INDEX (CRI)

CRI (Color Rendering Index) is a metric used to evaluate how well a light source reveals the true colors of objects in comparison to natural daylight. It is measured on a scale from 0 to 100, with higher values indicating better color accuracy. For example, a CRI above 80 is generally considered good for most indoor environments, while a CRI above 90 is preferred in settings where color precision is critical, such as art studios, retail displays, or medical facilities.

50 CRI

Compact Fluorescent

80 CRI

Standard LED

90+ CRI

Lux High CRI

BURNING HOURS

Burning hours refer to the lifespan of a light source. For LEDs, it's the time until brightness drops to about 80% of the original level. For incandescent bulbs, it's when the bulb stops working completely.

Let's Understand **Lighting Terms**

SURGE PROTECTION

Surge protection shields LED systems from voltage spikes caused by lightning, grid issues, or heavy equipment. A 4kV surge protector suits residential or low-risk indoor setups; 6kV protection meets industrial standards for places like warehouses and gyms and 10kV surge protectors are ideal for outdoor or high-risk areas prone to lightning.

Choosing the right surge capacity ensures longevity and reliability of LED lighting. Proper surge protection reduces maintenance costs and prevents unexpected failures.

4
kV

Commercial

6
kV

Outdoor

10
kV

IP RATINGS

IP rating (Ingress Protection) measures how well a light fixture is protected from solid particles and liquids. It consists of two numbers: the first digit indicates protection against solids (like dust), while the second digit represents resistance to liquids.

Ingress Protection (IP) ratings guide

Solids

Liquids

ⓧ	There is no available data.	0	No protection
0	No protection against ingress or contact of solids.	1	Protection against dripping water
1	Protection against objects larger than 50 mm.	2	Protection against dripping water at a 15-degree angle.
2	Protection against objects larger than 12.5 mm.	3	Protection against spraying water.
3	Protection against objects larger than 2.5 mm.	4	Protection against splashing water
4	Protection against objects larger than 1 mm.	5	Protection against water jets.
5	Protection against Dust.	6	Protection against powerful water jets.
6	Protection against Dust-tight.	6k	Protection against water jets higher pressure.

IP

Ingress
Protection

6

Solids
(Dust etc.)

5

Liquids
(Water etc.)

7 Protection against being immersed in 1 meter of water.

8 Protection against being immersed in at least 1 meter of water (or more)

9 Protection against powerful water jets with high pressure.

Environmental Benefits of LED Lighting

Energy Efficiency

Uses up to 90% less energy than incandescent bulbs.

Waste Reduction & Long Lifespan

- Lifespan of up to 25,000+ hours.
- Fewer replacements less waste from bulbs and packaging.

No Harmful Chemicals

- Mercury-free and lead-free.
- Safer for health and environment no special disposal needed.

100% Recyclable

- All components can be recycled.
- Supports a circular economy and reduces landfill waste.

No UV or Infrared Radiation

- Protects art, fabrics, and human health.
